Business playbook - how to actually earn from this

Indicative Indian market pricing (2026). Adjust to your city and his turnover.

1. Know his numbers before you quote

Ask: plates/day, average bill, Swiggy+Zomato share, current billing method (notebook / Petpooja / paper). A 3-branch biriyani shop doing ~250 orders/day at Rs. 200 average = ~Rs. 15 lakh/month revenue. Software at Rs. 2,000-5,000/month is under 0.3% of revenue - frame it that way, never as "an app".

2. Pricing options

A. One-time build + AMC (easiest first sale)

- Website + owner app, 3 branches, setup + training: **Rs. 35,000 - Rs. 60,000**
- Annual maintenance (updates, backups, phone support): **18% of project/yr**

B. Monthly subscription (better long-term)

Plan	Price / month	Includes
Starter	Rs. 999 / branch	Billing, stock, reports, website
Growth	Rs. 1,999 / branch	+ cloud sync, multi-user logins, WhatsApp daily summary
Pro	Rs. 3,499 / branch	+ recipe-wise stock deduction, GST reports, priority support

3 branches on Growth = Rs. 5,997/month = Rs. 71,964/year from one client.

Add a one-time onboarding fee of Rs. 9,999 (setup, cost sheet, staff training).

C. Hybrid (recommended) - Rs. 25,000 setup + Rs. 1,499/branch/month. Low entry, recurring income.

3. Sales script (use his own pain)

> *t; "You told me you can't say how many chicken biriyani vs mutton biriyani you sold*
> *t; yesterday, and you don't know if Zomato actually leaves you profit. Open this -*
> *t; here is yesterday: 62 chicken, 18 mutton, 24 kushka. Zomato collected Rs. 46,580,*
> *t; commission took Rs. 11,179, food cost Rs. 22,000 - you kept Rs. 15,293, 32.8% margin.*
> *t; Counter margin is 47.5%. Same data every day, one screen, and it tells your cook*
> *t; how many plates to prepare tomorrow."*

Then let him tap a bill himself. The demo closes the sale, not the slides.

4. Free trial that converts

14 days on his real data at ONE branch. Enter his true plate costs during setup - the "true profit" number is the moment he becomes a customer. Do not give a trial

without entering real costs; the app looks like a toy without them.

5. Scaling to more clients

- Every biriyani shop, tiffin centre, cloud kitchen and bakery has the same problem.
- Rebrand time is under an hour (see `docs/CUSTOMISE.md`).
- 20 shops Rs. 1,999/month = Rs. 39,980/month recurring.
- Ask for a video testimonial + Google review from Spot Light and reuse it.
- Referral offer: one free month for every shop he refers.

6. Things to promise carefully

- Aggregator order auto-import needs Swiggy/Zomato partner API approval - quote as a separate project, never bundle it.
- GST filing is his CA's job; you export data, you don't file returns.
- Data currently lives on the device - sell the cloud upgrade for multi-branch visibility rather than over-promising it today.

7. Delivery checklist per client

1. Rebrand (name, menu, photos, colours) - `docs/CUSTOMISE.md`
2. Deploy + custom domain - `docs/SETUP.md`
3. Enter real prices, plate costs, commissions, stock - 1 hour with the owner
4. Train counter staff on Billing only (10 minutes; that's all they need)
5. Train the owner on Dashboard + Reports (15 minutes)
6. Run `docs/TESTING.md`, hand over a backup file, set a weekly backup reminder
7. Invoice, collect, and schedule a 30-day review call to upsell the next module
