Spot Light Manager — Client Proposal

1. Proposal title

Spot Light Manager — Smart Billing, Stock, and Profit Management for Restaurants

2. Introduction

Spot Light Manager is a modern digital solution designed for restaurants, biriyani shops, and cloud kitchens to simplify day-to-day operations. It helps owners and staff manage billing, stock, profit tracking, and reporting from a single platform.

This solution is built to help businesses reduce manual errors, improve decision-making, and understand profitability more clearly.

3. The problem

Many restaurants still run their business using notebooks, WhatsApp messages, or separate tools for billing and stock. This creates several issues:

- poor visibility of daily sales
- difficulty tracking profit per order
- manual errors in billing
- limited stock control
- uncertainty about Swiggy and Zomato profitability
- lack of simple reports for owners

4. Our solution

Spot Light Manager brings essential operations into one simple dashboard.

It allows the business to:

- bill orders quickly
- track food cost and profit
- monitor stock levels
- view sales and report trends
- understand channel profitability
- manage branch-wise operations in a future-ready system

5. Key features

Billing

- fast order entry
- counter and online channel support
- discount handling
- payment mode tracking
- profit visibility before saving the bill

Stock management

- raw material tracking
- reorder alerts
- purchase and usage logs
- wastage tracking

Reporting

- daily and monthly sales summaries
- profit analysis
- item-wise sales reports
- prepared forecast for upcoming demand

Website and brand presence

- public website for customers
- menu display
- branch details
- contact and delivery information

6. Why this is valuable for the client

This system helps the owner save time, improve control, and make better business decisions.

Benefits include:

- less manual work
- faster billing
- better stock control
- clearer profit reporting
- better visibility into online platform performance
- stronger operational discipline

7. Ideal customers

This solution is ideal for:

- biriyani shops
- small restaurants
- cloud kitchens
- tiffin centers
- multi-branch food businesses that want better control

8. Pricing approach

We recommend a simple and practical pricing model:

Option A — One-time setup + support

- setup and onboarding
- website and app deployment
- staff training
- annual support plan

Option B — Monthly subscription model

- billing and reports
- stock tracking
- cloud backup and multi-device access
- ongoing support

Option C — Hybrid model

- one-time setup fee
- monthly recurring support for continued use and upgrades

9. Implementation plan

We will deliver the solution in phases:

1. Setup and branding
2. Menu and pricing configuration
3. Stock and reporting setup
4. Staff training and handover
5. Ongoing support and upgrades

10. Next steps

To move forward, we suggest:

- review the current business process

- finalize the shop menu and pricing structure
- decide on the desired deployment type
- agree on the implementation plan and pricing
- begin setup and staff training

11. Closing

Spot Light Manager is a practical, modern, and business-focused solution for restaurant owners who want to run their operations more professionally. It is a strong first step toward digitizing the business and improving profitability.

---

12. Current technology stack used in this project

Frontend

- React 19
- TypeScript 5.8
- Vite 8
- TanStack Router / TanStack Start
- Tailwind CSS 4
- Recharts
- Radix UI components

Runtime

- Node.js 24.x (portable runtime used locally in this environment)
- npm 11.x

Data layer

- browser localStorage
- no production backend database in the current version

Backend status

- no Java backend
- no Python backend
- no Spring Boot backend
- current version is frontend-first and local-storage based

This means the current product is modern and demo-ready, but it is not yet a full enterprise ERP backend system.
