Spot Light Manager - One-Page Business Plan

Business concept

Spot Light Manager is a restaurant management solution for biriyani shops, small restaurants, and cloud kitchens. It helps owners manage billing, stock, profit, and reporting from one simple platform.

Problem

Most restaurants still depend on manual processes, notebooks, and fragmented tools. This causes billing delays, poor visibility into profit, weak stock control, and limited reporting.

Solution

Spot Light Manager digitizes the core day-to-day operations of a food business. It offers a simple dashboard for billing, stock monitoring, profitability analysis, and reporting.

Target customers

- biriyani shops
- small restaurants
- cloud kitchens
- tiffin centers
- growing food businesses

Value proposition

The software helps owners save time, reduce mistakes, improve profit visibility, and run the business more professionally.

Core features

- fast billing
- stock tracking
- profit and cost visibility
- sales reports
- branch-ready structure
- website and brand presence

Revenue model

Possible business models:

- one-time setup + annual support
- monthly subscription
- hybrid setup with monthly recurring support

Go-to-market approach

- target local restaurant owners directly
- show a live demo with real numbers
- offer onboarding and training
- upsell cloud features and advanced modules later

Competitive advantage

The product is practical, easy to demonstrate, and designed specifically for restaurant operations. It is simple enough for a small shop owner to adopt quickly.

Current tech stack

- Frontend: React 19
- Language: TypeScript 5.8
- Build tool: Vite 8
- Routing: TanStack Router / TanStack Start
- Styling: Tailwind CSS 4
- Data layer: browser localStorage
- Runtime: Node.js 24.x / npm 11.x

Important note

The current version is modern and demo-ready, but it is still a frontend-first local product. It is not yet a full Java/Spring Boot enterprise backend system.

Next steps

1. Rebrand for the target customer
2. Configure real menu and pricing
3. Present a live demo
4. Offer setup and support
5. Expand to cloud and ERP features over time
