Spot Light Manager - WhatsApp-Friendly Sales Pitch

Hi [Client Name],

I have a modern restaurant management solution for your business.

It helps you manage billing, stock, profit, and reports from one simple platform.

Instead of doing everything manually, you can:

- bill faster
- track stock better
- know your real profit
- see which sales channel is working best
- run the shop more professionally

This is especially useful for biriyani shops, restaurants, and cloud kitchens.

I can show you a live demo and tailor it for your menu, prices, and branches.

If you want, I can prepare a demo for your shop and show you how it works in real time.

Thanks!
