Spot Light Biriyani - Restaurant Owner's Operating Manual

Welcome, Restaurant Owner!

This application was created to eliminate the two biggest financial leaks in restaurant operations:

1. **Hidden Aggregator Commission Bleed**: Not knowing how much money Swiggy and Zomato actually take from your profits.

2. **Food Wastage & Raw Material Pilferage**: Cooking too much food on slow days and running out of biriyani on busy days.

With **Spot Light Manager**, you can see your **real cash profit per order** before the bill is even punched, and forecast exactly how many plates to cook tomorrow.

1. Your 30-Second Daily Routine

Morning Routine (11:00 AM - 12:00 PM)

1. **Check Prep Forecast**:

- Go to `/app/reports` on your phone or counter tablet.

- Look at the column titled **"Prep Tomorrow"**.

- It tells you the exact number of plates (Chicken Biriyani, Mutton Biriyani, Kushka) to cook today based on a weighted 4-week average of this same day of the week.

- Hand these numbers to your Head Cook / Dum Master.

2. **Record Morning Purchases**:

- Go to `/app/stock`.

- If you bought 25 kg chicken, 50 kg basmati rice, or oil this morning, tap **"+ Record Movement"** -> Select **"Purchase"** -> enter the quantity.

- Your live raw material stock and inventory value update instantly.

During Lunch & Dinner Rush

- Your counter cashier handles all billing under `/app/billing`.
- Every plate of biriyani billed at the counter or received via Swiggy/Zomato is recorded against the active branch.

Night Audit & Closing Routine (10:30 PM)

1. **Open `/app` (Dashboard)**:

- Select **"Today"** in the top-right filter.

- Review your 4 Key Numbers:

- **Revenue**: Total money collected from all channels.

- **Net Profit**: Your actual take-home operating cash (Gross Food Cost Swiggy Cut Packing).

- **Platform Commission**: Exactly how much Swiggy and Zomato deducted from you today.

- **Food Cost (COGS)**: What your meat, rice, spices, and oil cost.

2. **Review Channel Profitability**:

- Scroll down to the **"Channel Profitability"** table.

- Compare Counter vs. Swiggy vs. Zomato margin %. If an online channel has less than 20% margin, adjust your online menu price in `/app/items`.

3. **Weekly Sunday Backup**:

- Go to `/app/settings`.

- Tap **"Download Backup (JSON)"**.

- Save this small file to your WhatsApp or Google Drive. This ensures your sales data is 100% safe forever.

---

2. Understanding Your Profit Math

Traditional billing machines only show:

$$\text{Revenue} = \text{Item Price} \times \text{Quantity}$$

Spot Light Manager calculates the real operating truth:

```
  Customer Pays (Net Revenue)
– Food Cost (Meat + Rice + Oil + Spices per plate)
– Aggregator Cut (e.g. Swiggy 22% commission + GST)
– Packaging Fee (Container, bag, spoon cost)
================================================
= TRUE NET OPERATING PROFIT
```

Note: Rent, electricity, and staff salaries are fixed monthly costs. To calculate your net monthly take-home, simply subtract your monthly rent and payroll from your monthly Net Profit total on the Dashboard.

---

3. How to Update Prices & Margins (`/app/items`)

When chicken or mutton market rates rise:

1. Open `/app/items` on the manager tablet.

2. Click any dish:

- **Counter Price**: What walk-in customers pay.

- **Online Price**: What Swiggy/Zomato customers pay (always keep this 15-25% higher to offset platform commission!).

- **Plate Cost**: What 1 plate costs you to make (Meat + Rice + Oil + Masala + Egg + Raita).

3. The margin and margin % recalculate instantly.

---

4. Multi-Branch Operations

- If you have multiple branches (e.g., Tharamani, Adyar, Velachery):
- Use the **Branch Dropdown** at the top right of the screen.
- Filter Dashboard and Reports by:

- *All Branches* (Combined business view)

- *Individual Branch* (Audit specific branch manager performance)

- Add new branches anytime in `/app/settings`.
