White-Label Rebranding Guide & Restaurant SaaS Billionaire Playbook

1. Is This Application Generic?

YES, 100%.

Although the demo data and food photography are tailored for *Spot Light Biriyani*, the entire architecture is a **universal restaurant management and POS engine**.

You can white-label and sell this software to:

- **Biriyani & Mandi Restaurants** (Dum biriyani, mutton, kushka, grills)
- **Chai, Coffee & Tiffin Cafes** (Chai, samosas, idli, dosa, parotta)
- **Burger, Pizza & Fast Food Joints** (Combos, fries, beverages)
- **Chinese, Momo & Roll Corners** (Noodles, fried rice, shawarmas)
- **Cloud Kitchens on Swiggy / Zomato** (Multi-brand delivery kitchens)

2. How to Rebrand for a New Client in 15 Minutes

Step 1: Business Information & Branches (`/app/settings`)

Open the app in your browser and navigate to `/app/settings`:

1. **Business Name**: Change *"Spot Light Biriyani"* to your client's name (e.g. *"SS Hyderabad Biriyani"* or *"Madras Chai Cafe"*).

2. **Branches**: Update branch names, addresses, and phone numbers.

3. **Channel Commissions**: Enter the client's actual Swiggy (e.g. 22%) and Zomato (e.g. 20%) commission percentages and packaging fee.

Step 2: Configure Menu Dishes & Plate Food Costs (`/app/items`)

Open `/app/items`:

1. Delete demo dishes not sold by the client.

2. Add the client's dishes:

- **Counter Price**: What walk-in counter customers pay.

- **Online Price**: What Swiggy/Zomato customers pay.

- **Plate Cost**: Cost of ingredients to prepare 1 portion.

3. Margins calculate dynamically for every dish.

Step 3: Change Brand Accent Colors (Optional)

In [src/styles.css](file:///c:/Users/ManikandanSoundar/OneDrive%20-%20Adeahub/Personal%20Work/spotlight-biriyani-full-kit/spotlight-biriyani/src/styles.css):

- For a **Vegetarian / Pure Veg Cafe**: Change `--primary: oklch(0.68 0.15 150)` (Emerald Green).
- For a **Chai / Bakery Cafe**: Change `--primary: oklch(0.75 0.18 70)` (Warm Amber Gold).

• For a **Fast Food / Pizza Joint**: Change `--primary: oklch(0.65 0.22 25)` (Vibrant Crimson Red).

---

3. The 3 Winning Monetization Models

Model A: One-time Setup + Annual Maintenance (Quick Upfront Cash)

• **Rs. 15,000 Upfront Setup Fee**: You setup their menu, configure their tablet, connect their 80mm thermal printer, and train staff for 1 hour.

• **Rs. 6,000 / Year / Branch**: Annual maintenance, tech support, and data backups.

• *Best for single standalone shops who want to buy outright.*

Model B: Monthly Subscription / SaaS (Predictable Recurring Income)

• **Single Branch**: **Rs. 1,499 / Month**.

• **Multi-Branch (up to 3 branches)**: **Rs. 3,499 / Month**.

• *Includes software, updates, and customer support.*

Model C: Cloud Enterprise Upgrade (High-Ticket Upsell)

• When the owner expands to 4+ branches and wants to monitor live sales from his iPhone while sitting at home, charge **Rs. 25,000 Setup + Rs. 2,500/Month** to connect the app to a Supabase Cloud database!

The Pitch Script to Close Any Restaurant Owner in 5 Minutes:

> *t; "Good evening, Anna/Sir. Most POS machines like Petpooja or billing computers cost Rs. 25,000 to Rs. 40,000 upfront, lock you into proprietary hardware, and crash whenever there is a power cut or Wi-Fi drop.*

>

> *t; More importantly, they only tell you your gross sales - they hide how much money Swiggy and Zomato eat from your pockets.*

>

> *t; Look at this demo on my phone: When you bill 2 Chicken Biriyani on Swiggy, our system instantly deducts food cost, platform commission, and packaging to show your actual take-home profit before you save.*

>

> *t; Plus, our Prep Forecast tells your kitchen cook exactly how many plates to prepare each morning, saving you Rs. 3,000 to Rs. 5,000 every single week in wasted meat and rice.*

>

t; It runs on any tablet or phone you already have with zero new hardware to buy. Let me set it up for your kitchen today for just Rs. 15,000."
